

BOOTSTRAP TEMPLATE MAKEN

1 download bootstrap op <http://getbootstrap.com/getting-started/#download>

Download

Bootstrap (currently v3.3.0) has a few easy ways to quickly get started, each one appealing to a different skill level and use case. Read through to see what suits your particular needs.

Bootstrap

Compiled and minified CSS, JavaScript, and fonts. No docs or original source files are included.

[Download Bootstrap](#)

Source code

Source Less, JavaScript, and font files, along with our docs. **Requires a Less compiler and some setup.**

[Download source](#)

Sass

[Bootstrap ported from Less to Sass](#) for easy inclusion in Rails, Compass, or Sass-only projects.

[Download Sass](#)

Bootstrap CDN

The folks over at [MaxCDN](#) graciously provide CDN support for Bootstrap's CSS and JavaScript. Just use these [Bootstrap CDN](#) links.

```
<!-- Latest compiled and minified CSS -->
<link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.0/css/bootstrap.min.css">

<!-- Optional theme -->
<link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.0/css/bootstrap-theme.min.css">

<!-- Latest compiled and minified JavaScript -->
<script src="https://maxcdn.bootstrapcdn.com/bootstrap/3.3.0/js/bootstrap.min.js"></script>
```

[Copy](#)

Install with Bower

Install and manage Bootstrap's Less, CSS, JavaScript, and fonts using [Bower](#).

```
$ bower install bootstrap
```

[Copy](#)

BOOTSTRAP SYNTAX:

12 kolommen (ipv 16!)

Class="col-sm-9"

Indien divs naast mekaar staan, komt er een <div class="row"> rond

Divs krijgen breedtes via klasse col-md-4 xs sm md lg

	Extra small devices Phones (<768px)	Small devices Tablets (≥768px)	Medium devices Desktops (≥992px)	Large devices Desktops (≥1200px)
Grid behavior	Horizontal at all times	Collapsed to start, horizontal above breakpoints		
Max container width	None (auto)	750px	970px	1170px
Class prefix	.col-xs-	.col-sm-	.col-md-	.col-lg-
# of columns	12			
Max column width	Auto	60px	78px	95px
Gutter width	30px (15px on each side of a column)			
Nestable	Yes			
Offsets	N/A	Yes		
Column ordering	N/A	Yes		

Je kan een container rond divs plaatsen, indien de inhoud niet tegen de linkermarge mag “kleven”.

Xs: kolommen blijven ten alle tijden naast mekaar staan.

Container staat steeds rond row en die staat dan weer rond 2 of meerdere divs naast mekaar.

Container = gecentreerde div met marges

```
<div class="container">
  <div class="row">
    <div id="inhoud" class="col-sm-9">inhoud</div>
    <div id="zijbalk" class="col-sm-3">zijbalk</div>
  </div>
</div>
```

Container-fluid = 100% breed

```
<div class="container-fluid">
  <div class="row">
    <div id="footer1" class="col-sm-4"></div>
    <div id="footer2" class="col-sm-4"></div>
    <div id="footer3" class="col-sm-4"></div>
  </div>
</div>
```

Glyphicons: iconen

<http://glyphicons.bootstrapcheatsheets.com/>

``

Vele hulptools:

<http://bootswatch.com/> (gratis themes)

www.pingendo.com (gratis programma – visuele bootstreditator)

<http://www.bootply.com/>

<http://startbootstrap.com/>

GLYPHICON: vergelijkbaar met Font Awesome = lettertype van symbolen, iconen.

<http://glyphicons.bootstrapcheatsheets.com/>

Voorbeeld:

`Mgazine`

In combinatie met fixed nav: body bovenpadding geven van 50px of meer.

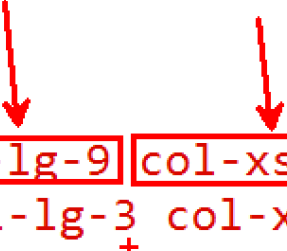

```
body{padding-top:50px;}
```

Divstructuur:

```
<div class="container-fluid">
  <div class="row">
    <div id="inhoud" class="col-sm-9">inhoud</div>
    <div id="zijbalk" class="col-sm-3">zijbalk</div>
  </div>
</div>
```

Het is mogelijk om de onderlinge verdeling te wijzigen per schermgrootte:

```
ontainer-fluid">
"row">
"inhoud" class="col-lg-9 col-xs-6">inhoud</div>
"zijbalk" class="col-lg-3 col-xs-6">zijbalk</div>
```

Een lege kolom: offset

```
50 <div class="container-fluid">
51   <div class="row">
52     <div id="inhoud" class="col-lg-8">inhoud</div>
53     <div id="zijbalk" class="col-lg-3 col-lg-offset-1">zijbalk</div>
54   </div>
55 </div>
56
```

Probleem: fixed nav staat op adminmenu

Tijdelijk:

```
#toolbar{ margin-top:50px;}
body{padding-top:100px !important;}
```

Page.tpl.php

```
<div class="header">
  <div class="container">
    <nav class="navbar navbar-fixed-top navbar-inverse" role="navigation">
      <div class="navbar-header">
        <button type="button" id="nav-toggle" class="navbar-toggle" data-
toggle="collapse" data-target="#main-nav">
        <span class="sr-only">Menu</span>
```

```

        <span class="icon-bar"></span>
        <span class="icon-bar"></span>
        <span class="icon-bar"></span>
        </button>
        &nbsp;<a href="node" class="navbar-brand scroll-top">
        M<span class="glyphicon glyphicon-fire"></span>gazine</a>
        </div>
<div id="main-nav" class="collapse navbar-collapse">
    <?php if ($page['menu']): ?>
    <?php print render($page['menu']); ?>
    <?php endif; ?>

</div>
</nav>
</div>
</div>
<div class="container-fluid">
    <div class="row">

<?php if ($page['zijbalk']) { ?>
    <div id="inhoud" class="col-sm-9">
<?php } else { ?>
    <div id="inhoud" class="col-sm-12">
<?php } ?>

    <?php print $breadcrumb; ?>
    <a id="main-content"></a>
    <?php if ($tabs): ?><div id="tabs-wrapper" class="clearfix"><?php endif; ?>
<?php print render($title_prefix); ?>
    <?php if ($title): ?>
    <h1<?php print $tabs ? ' class="with-tabs" : " ?><?php print $title ?></h1>
<?php endif; ?>
    <?php print render($title_suffix); ?>
    <?php if ($tabs): ?><?php print render($tabs); ?></div><?php endif; ?>
<?php print render($tabs2); ?>
    <?php print $messages; ?>
    <?php print render($page['help']); ?>
    <?php if ($action_links): ?><ul class="action-links">
    <?php print render($action_links); ?></ul>
    <?php endif; ?>
    <div class="clearfix">
    <?php print render($page['content']); ?></div>
</div>

<?php if ($page['zijbalk']): ?>
    <div id="zijbalk" class="col-sm-3">
    <?php print render($page['zijbalk']); ?>
    </div>
<?php endif; ?>
</div>

```

</div>
